DETAILED ACTION

Status of the Application

1. Receipt is acknowledged of a response to a restriction requirement, which was dated on July 3, 2002 (Paper No. 11).

Status of the Claims

2. Claims 1-74 were pending. Applicants 1-19, 26-32, 36-38, 44-49, 60-63, 66, 68-74 have been canceled. In addition, claims 20, 33-35, 39-43, 50, 52, 54, 55 and 56 have been amended. No claims were added. Therefore, claims 20-25, 33-35, 39-43, 50-59, 64, 65 and 67 are currently pending.

Withdrawn rejections and/or Objections

3. All outstanding objections and/or rejections are withdrawn in view of Applicants' amendments and/or arguments

Reasons for Allowance

4. The claims are allowed for the reasons that the prior art of record does not teach or fairly suggest the use of screening a library against the claimed "TBM-SME" complex to find a "second ligand" to the TBM. The closest prior art of record is a combination of the Erlanson et al. and Hajduk et al. references, which teach screening ligands against the TBM separately and

then subsequently joining said ligands with a linker. The combined teachings of Erlanson et al. and Hajduk et al., however, do not teach the use of the "TBM-SME" in the screening process itself. In addition, Kim et al. do not teach or suggest the use of a "TBM-SME" in the screening process. Applicants' current amendments and/or arguments also overcome the problems regarding definiteness of the claim language (e.g., see 10/22/04 Response, pages 8-10). The Examiner agrees with Applicants' arguments in their entirety including their assessment of the term "near" finding the specification support cited by Applicants persuasive. Finally, the Examiner also agrees to withdraw the outstanding "provisional" double patenting rejections as these are the only rejections standing in accordance with MPEP § 804 I.B. as suggested by Applicants.
